

FULL SERVICE

Mulder Montage offers complete service provisions to manufacturers and operators of escalators and moving walks. From installation, disassembly, completion and making installations operational up to and including transport, temporary storage and maintenance.

As well as comprehensive services, Mulder Montage is specialised in developing innovative products for escalators and moving walks. The engineering department combines their practical expertise and experience with the latest techniques and develops products that contribute to the quality, safety and the lifespan of the installations.

Visit our website for detailed information on our products www.muldermontage.com

Products:

- Lightspeed – skirt panel safety system
- Lightspeed – comb plate safety system
- Lightspeed – floor plate detection system
- Reactivation system
- G-rib (step repair)
- Anti Slip
- **ECO**LATOR (energy saving)
- Floor plates (custom made)
- LED lighting

For manufacturers and operators of escalators and moving walkways

MULDER MONTAGE MORE THAN 40 YEARS OF EXPERIENCE

Originally Mulder Montage was a transport company called Mulder Transport founded by Mr. Mulder in 1971. The transport company transported products including escalators and moving walks for escalator manufacturers. In those days it was common for escalator manufacturers to install their products as well as produce them.

It turned out that Mulder Transport was able to transport and install these faster and cheaper than the escalator manufacturers themselves. This led to the first installation assignment in 1973, building the metro in Rotterdam.

Thus Mulder Montage was born and from that moment on we gained experience installing and disassembling escalators.

In the past 15 years, more than 200 metro, railway station and airport projects have accomplished. Mulder Montage has been involved in various prestigious projects both in and outside of Europe. For example with the Atomium in Brussels, Belgium, Westfield Shopping Centre in Stratford, England, Museum Le Louvre in Paris, France and the Ben Gurion airport in Tel Aviv, Israel.

TRANSPORT AND WAREHOUSING

Mulder Montage is specialised in the transport of escalators and moving walks. Besides this branch of transport we execute heavy transport for third parties, providing the total process from permits, exemptions to loading and unloading.

Besides transport, Mulder Montage also offers temporary storage facilities.

Mulder Montage is a complete service provider taking the full physical distribution of escalators and moving walks and parts of the manufacturer's hands. With this full-service, Mulder Montage takes care of all transport, storage and installation requirements. The advantage is that the manufacturer only needs to deal with one partner for the entire physical distribution process. In this way everything is efficiently arranged and it is possible to deliver 'Just in Time'.

ASSEMBLY AND DISASSEMBLY

For building projects to progress correctly they require good and realistic planning. Mulder Montage actively advises with scheduling the installation of escalators and moving walks. If they are installed too early then the expensive installations could be damaged in the subsequent phases of the build. If they are installed too late then it is often more difficult because inner walls or other elements can potentially form obstacles. It is thus vital to determine the right time; every situation is different so installation requires proper preparation. To achieve this Mulder Montage performs project visits and provides customised advice by way of work schedules, situation and installation drawings and load diagrams of the interplay of forces on the building. The installations are then completed with specialised and self-developed materials.

MAINTENANCE AND INSPECTIONS

During an installation's lifespan it is vitally important that it is periodically inspected and maintained to optimise its working life and safety. Mulder Montage performs these inspections or assists during maintenance. On-site cleaning can be performed simultaneously with these inspections. Cleaning can take place with technical assistance on site simultaneously with the inspection.

By performing inspections and subsequent repairs in time the installation will remain in optimum condition. Mulder Montage has a stock system and network to meet all the demands for parts of the various manufacturers. By performing timely inspections and the subsequent repairs the installations remain in optimum condition.

WORKING AREA:

Services:

- Transport
- Storage
- Assembly & Disassembly
- Final Assembly
- Testing & commissioning
- Support & maintenance
- Inspection
- Revision
- Delivering Parts

SAFETY AND QUALITY

Mulder Montage's policy is aimed at meeting external quality standards. Receiving and keeping these accreditations is an integral part of the quality policy. Investments in quality and safety are high priorities at Mulder Montage. To safeguard and guarantee this, Mulder Montage has established a quality system that meets ISO-9001 requirements. Mulder Montage also meets the safety standards according to VCA* (Dutch SCC) and our staff are competently trained and have the required knowledge and experience to work safely and deliver quality. Since Mulder Montage provides its staff with periodic training and specific courses, such as *Safety along railway tracks, NEN3140* (electric) and *SOL Modules*, they are well prepared and can be employed on a wide range of assignments.
